

Development Manager

£70K + Flexible Benefits Reading

We are the CRM/e-business division of a multi-billion dollar IT services organisation with an unrivalled reputation for innovation, excellence and quality in all our products and services. Our core CRM solution, designed using best of breed OO principles and harnessing the power of call centres, WAP, digitalTV and the internet is literally revolutionising the way organisations all over the world do business.

At our development centre near Reading, we have assembled an elite team of IT professionals responsible for the on-going development of our core CRM technology. With plans to grow this team further, we now wish to appoint an experienced manager to take responsibility for the entire development lifecycle.

You will be responsible for:

Managing the delivery of innovative C++, Java and Internet development projects
Staff management @ recruitment, appraisals, training
Evaluation and introduction of new technologies and leading our future product strategy
Evangalising the technical architecture both internally and externally

Using your solid grasp of distributed architectures and proven track record of complex software project management within time and budget, you will drive the delivery of new releases of our core CRM technology @ evolving it so that it continues to exploit the very latest developments in n-tier architectures.

With at least ten years' IT experience gained working for either a software house, management consulting firm or corporate end-user, you should be comfortable managing projects utilising distributed object technology and have a keen awareness of future industry trends in software and component development. Exposure to call centres, CRM or internet technology would be an advantage.

To apply, please email your CV, quoting ref: DM/CRM to jobs@netobjectives.co.uk
