

Internet Software Startup

Packages to £60K plus significant 'startup' share options

"Ever wished you could have been involved in a hi-tech startup from the beginning? To have been a key member of the original design and development team? To directly experience and contribute to the explosive growth possible in a venture-backed Internet startup? To share in the substantial financial rewards arising from 'startup' share options?"

Well, here's your chance..."

Beaconsfield, Bucks

0.1% of Yahoo! Inc. = \$36,000,000[†]
0.1% of Amazon.com = \$26,000,000[†]
0.1% of BreakerTech = YOUR FUTURE !

BreakerTech is a technology-led software startup in the hottest of application areas - community publishing on the Internet. We need your talent and experience to help us build a revolutionary new kind of e-commerce portal site - one that tears away the age-old distinctions between publishers and consumers, enabling individuals and multinationals to distribute commercially valuable multimedia content over the Internet to a global audience.

We are looking for bright and enthusiastic individuals capable of applying new technologies quickly within a small, tightly-knit team. You will be looking for a fun, stimulating and fast-learning environment where your creativity and flair can flourish in a competitive global marketplace. Your innovative software solutions will be used by publishers of commercially valuable content (record labels, entertainment, educational, financial publishers, etc.) as well as millions of consumers around the world.

Internet Systems Engineers

As an Internet Systems Engineer, you should be able to demonstrate at least two to three years' experience designing and building the engine code that drives major e-commerce sites, preferably as the lead designer/developer.

Experience of the following would be extremely advantageous:

- ASP script development using Jscript
- SQL, ADO, ODBC, COM integration
- Server-side integration with relational databases, e.g. SQL Server
- HTML, JavaScript, VBScript, applets, plugins, etc.
- Microsoft InterDev, FrontPage, Exchange, IIS 4.0
- NT server and networking administration (TCP/IP, HTTP, DNS, SSL, firewalls, proxy servers, dial-up, etc.)
- Online payment/credit-card clearing

Development Manager

As a Development Manager, you should be able to demonstrate a successful early career in software development followed by at least two to three years' experience of managing small, elite development teams through the full product lifecycle.

Experience of the following would be extremely advantageous:

- Responsibility for the entire development lifecycle - from planning through requirements capture, design, implementation, testing, deployment and support
- Responsibility for budget and resource allocation
- Managing the development of high quality commercial end-user software under tight deadlines
- Managing the development of Internet or Intranet client-server software and applications
- Managing C++ development projects on Windows
- Experience in a startup environment

To apply, please email your CV to our advising consultant Chris O'Grady at BT@netobjectives.co.uk. Alternatively, write to him at netObjectives Ltd, PO Box 2741, Reading, RG1 8XW. To find out more please call Chris on 0118 9303600. www.netobjectives.co.uk

recruitment for distributed computing
