

# Know C++ ... No Problem

## Technical Consultants

## Reading Outskirts

## £35K - £100K + Flexible Benefits

If you think that you know C++, then learning Java, XML, CORBA and COM will be no problem! We're building a team to deliver novel eCRM solutions to today's most forward thinking companies utilising the very best in distributed computing technologies. Backed by the resources of a multi-million dollar IT services organisation and with a number of already successful deployments, we can still offer all the dynamism and 'small company feel' of a fast-growing startup.

We have opportunities at all levels including Developers, Team Leaders and Technical Architects. If you can demonstrate at least 9 months experience of C++ design or development and you've got a passion for learning new skills then you can look forward to these...

Java, Swing,  
EJB, XML,  
MFC, ATL,  
UML

Middleware technologies  
Application servers  
RDBMS design and implementation  
Internet solution architectures

You will learn our core technology in small teams in product development before applying your expertise to complex customer projects encompassing call centres, WAP, digitalTV and the Internet all across the UK. There are also opportunities to travel further afield to places like USA, Singapore and Australia. But don't worry, there is no more than 50% travel so you will still have a life!

And if you want a career, we can offer you a gateway to early responsibility and real opportunities to influence our business in the exploding eCRM market.

To apply, please email your CV quoting ref: TC/EB to [jobs@netobjectives.co.uk](mailto:jobs@netobjectives.co.uk)
