## sealed[media]

**Beaconsfield, Bucks (Junction 2, M40)**

**£30k - £70k + pre-IPO share options**

At SealedMedia we develop and sell ground-breaking technology and web-hosted services for publishers all over the world to bring new and exciting digital content (e.g. text, images, video, music, software) to consumers via PCs, palmtops and the next generation of net-enabled consumer devices. As a mass market application based on sophisticated, streaming, cryptographic technology, it promises to change forever the way we all use the Internet. It also means we need to employ the very best people the industry has to offer.

At our development centre in Beaconsfield, Bucks., we have a number of opportunities for bright, enthusiastic individuals who want to make a real impact on the dot com revolution. As well as significant pre-IPO share options, we offer a leading-edge environment where you will continue to learn new skills alongside talented colleagues and work on projects that will inspire and bring out the very best in you – qualities that many other companies don't even need.

### C++ or JAVA DESIGNER/DEVELOPERS £35k - £60k

We're looking for core designer/developers to work in small, tightly-knit teams on such fun stuff as integrating our core Digital Rights Management client with audio and video streaming servers and players, building JAVA GUIs, productising our APIs, integrating with e-commerce web sites, etc. Experience of SOME of the following would be extremely advantageous:

- Class library development
- Distributed Internet or Intranet client-server applications
- C++ or Java GUI development
- Visual C++/J++, SourceSafe, InstallShield
- High scalability/high throughput relational databases e.g. Oracle, SQL Server
- HTTP, TCP/IP, sockets
- Swing, JavaBeans, ProtoView, AWT extension class libraries
- Security protocols (encryption, PKI, authentication, signatures etc.)
- Development of multimedia viewers (text, images, audio, video)
- Knowledge of CORBA or COM

### SOFTWARE TEST SYSTEMS ENGINEERS £30k - £60k

We seek 'hands-on' test engineers with experience of planning, developing, managing and implementing the test procedures required to ensure the timely delivery of quality end-user software products and net-based services to a global audience. Ideally, you should have at least two to three years' experience of software testing gained in a product development environment, preferably including Internet/Intranet technology. You will be a well-organised, analytical software testing professional with the ability to work to demanding deadlines in a fast-paced, fast-growing organisation. Testing experience on any of the following will be particularly valuable:

- Browser plugins and/or multimedia viewers
- Net-based client-server systems, access control systems
- High performance multi-threaded database servers
- Internet connectivity through firewalls
- E-commerce web sites (shopping baskets, c/card, etc.)

### CONSULTANTS £45k - £70k

You will be involved in a variety of activities including establishing and managing pilot implementations, working with customer and third party web developers to integrate our technology with the next generation of content-driven web sites, design and delivery of solution demonstrations and leading technical design discussions with customers. You should be able to demonstrate at least two years' experience of Internet development – experience in SOME of the following areas would be advantageous. Most important of all is an eagerness to learn and apply new technologies quickly in the Internet space.

- Customer facing consultancy projects/project management
- ASP script development using Jscript/VBscript
- Integration of disparate systems using COM, C++, and Java APIs
- Web application servers (e.g. Coldfusion, Vignette etc.)
- Dynamic web site creation using (D)HTML, CGI/BIN, Perl, etc. on Windows NT and UNIX
- Server-side integration with relational databases e.g. SQL Server
